

The Kodak NexPress Digital Press enables Old Trail Printing to open up a whole new world of printing options to you. With the quick turn around of a digital printer and the quality of a traditional offset press, the NexPress can add value and efficiency to your printing jobs.

The NexPress brings several new and exciting options to your design capabilities:

- Add an additional red, green or blue ink to the standard process color inks to extend and enhance the color values of your printed piece.
- With the ability to add an in-line clear matte coating to the printed sheet, you can cover the entire sheet or apply the coating to selected areas only, simulating the effect of spot varnish.
- An offline glossing unit can create a gloss coating on the full sheet for more color depth and protection.
- With the dimensional clear feature, you can add the look and feel of embossing at a fraction of the cost of die creation and offline die stamping.
- The dimensional clear can also be used to simulate different stock textures, saving you the costs required for special stocks. You can even simulate stock textures that would normally be difficult or impossible to print on.
- Digital printing is more cost effective on short to medium run print runs with less make ready and fewer waste sheets. Digital printing can also be more economical and environmentally friendly.
